**carbon is our business**

## pultrusion

core-business pultrusion stands for highest claims in the profile technology. additionally to our semi-finished products out of composite materials (carbon, glas, basalt, kevlar) we are developing intelligent profiles in cooperation with our customers.

highest claims in the pullwinding – pullbraiding and performing technology open us nearly unlimited possibilities.

## carbon is our business

carbon is our business, stands for secar technologie - a company with more than 10 years of experience in the high-performance composite business.

pioneering spirit, engagement and innovation technologies shapes our modern high-tech company.

increasing our production facility is the next step to a strong and modern enterprise and to meet the future challenges in the most professional way.

we are specialized on the development and production of composite and semi-finished components.

secar technologie gmbh is concentrating on three main points: pultrusion, composites, cnc center

starting from low volume production and prototyping up to high volume production we guarantee to fulfil our customers requirements.

planing – cad/cam – prototyping – series are goals which we try to realise in cooperation with our customers.

## composite

carbon is the material of the future. the development and production of 3dimensional parts, cases and sandwich components is done according to the existing technologies inside secar.

starting from the appropriate concept, projectmanagement up to finishing (lackering) and assembling all processes are carried out in our company.

## cnc-center

in todays rapidly changing world, it is most important to speed up and optimise production processes. secure your advantage through our know-how in the machining technique.

15 most modern cnc-centers with cad/cam-integration are ready to put your requirements in milling – cnc turning – eroding and grinding into reality.
